		Page 7		Page 8
1	QBE Specialty Insurance Company	and General Security	1	you've given in the context of you being an expert
2	Indemnity Company of Arizona.	,	2	witness?
3	MS. MCDONNELL: Marlie	McDonnell of Clyde	& 3	A. Yes.
4	Co. on behalf of Defendant Allianz.		4	Q. And the same for your court testimony?
5	MR. WHANG: Calvin Wha	ng for with Selman		A. Yes.
6	Leichenger with on behalf of Alli	6	6	Q. Okay. I'll go through some deposition ground
7	Leichenger with on behan of Am	ca world.	7	rules just so that we're on the same page.
8	DR. ALEXIS SAUER-BUD	TE having been first	8	First of all, do you understand that you're
9			9	under oath?
	satisfactorily identified and duly sw	om, testined as		
10	follows:		10	A. I do.
11	EVAMINATION		11	Q. Do you understand the oath that you've taken
12	EXAMINATION DV MP. WEIGG		12	has the same effect as if you were testifying in court?
13	BY MR. WEISS:		13	A. Yes.
14	Q. Good morning, Doctor. My		1	Q. The court reporter will be taking down the
15	from Reed Smith. I represent the pl		15	testimony today, and there'll be besides you and me,
16	action. Have you given a deposition	n before?	16	there may be other people in the room talking. Counsel
17	A. I have.		17	might raise objections. So it's important that we not
18	Q. On approximately how man	y occasions?	18	talk over one another. Are you okay with that?
19	A. Seven, I think.		19	A. Of course.
20	Q. Have you testified in court	pefore?	20	Q. Yeah. So if you'll just wait for me to finish
21	A. I have.		21	my question before you answer, and I'll try to wait for
22	Q. On approximately how man	y occasions?	22	you to finish your answer before you before I ask my
23	A. One.		23	next question, and we be mindful of counsel, everybody
24	Q. Were the all the prior dep	ositions that	24	the room would have a better day, and including the

Page 105 Page 106 1 greater than or equal to six feet apart. In addition, 1 Q. This was one of the articles that you found in 2 facilities should provide engineering and administrative 2 your review of articles about incidents of fitness clubs? 3 controls including improving ventilation, enforcing 3 A. Yes, that's correct. 4 physical distancing, increasing opportunities for hand 4 Q. On page 2 of 9, in the third paragraph towards 5 hygiene, and reminding all employees and patrons to (1) 5 the middle, it says, "However, considering that COVID-19 6 isolate when experiencing COVID-like systems or after 6 is transmitted by droplet and fomites, high-impact group 7 7 receiving a positive SARS-CoV-2 test; and (2) quarantine exercise in a confined indoor spaces, such as a Zumba 8 after a potential exposure to SARS-CoV-2 and while 8 class, could provide an environment prone to easy 9 awaiting test results. Conducting exercise activities 9 transmission of SARS-CoV-2 infection as the droplets produced by exhalation or cough of a patient during the entirely outdoors or virtually could further reduce 10 10 11 SARS-CoV-2 transmission risk." Do you see all of that? 11 exercise have higher chance of reaching the nose, mouth, 12 12 A. I do. or eye of other class participants directly, as well as 13 Q. Would you consider those statements to be 13 remaining on the surface of the exercise equipment and 14 outside of the -- outside of your opinions in this case? 14 later transmitted by contact." Do you see that? 15 15 16 MR. WEISS: Okay. Let's go to 10. 16 Q. Do you agree that exercise -- high-impact 17 (Exhibit No. 13, Bae Article marked for 17 group exercise in a confined indoor space could provide 18 identification) 18 an environment prone to the easy transmission of 19 Q. So Exhibit 13 is an article titled 19 SARS-CoV-2? 20 "Epidemiological Characteristics of COVID-19 Outbreak at 20 MS. MANZO: Objection to form. 21 Fitness Centers in Cheonan, Korea." And it was accepted 21 A. Opinions regarding transmission are outside of 22 22 July 31, 2020. Is this another article that's listed in my scope of assignment in this case. 23 23 your Appendix C? Q. Do you have any opinions as -- well, strike 2.4 A. Yes, it is. 24 that. Page 107 Page 108 1 There's a statement in here that droplets whether that infectious virus could be transmitted to 2 produced by exhalation or a cough of a patient could 2 another person? 3 remain on the surface of the exercise equipment and later 3 A. No. be transmitted by contact. Do you see that? MR. WEISS: Let's mark -- do 11. 5 5 (Exhibit No. 14, Anderson Article marked for A. Yes. I'm not sure if it's -- "patient" is the 6 correct word, but somebody infected, yes. identification) 7 7 Q. Okay. And do you have an opinion as to O. Exhibit 14 is another article titled "An whether droplets exhaled by an infected person could Outbreak of COVID-19 Associated With a Fitness Centre 9 9 remain on the surface of exercise equipment and later be Saskatchewan: Lessons for Prevention." And it looks 10 10 transmitted to someone else? like this was published in November of 2021. Is this 11 A. So only in regards to the -- what happens to 11 another article that's listed in your Appendix C? 12 the SARS-CoV-2 virus on the surface and how long it may 12 A. Yes, it is. 13 be there. Not necessarily the part, which was the second 13 Q. And is this, again, one of the articles that 14 part of your question, transmission to a person. 14 you located regarding fitness clubs? 15 15 Q. Okay. So you have an opinion -- your opinions A. Yes. During that search, exactly. 16 relate to what happens when the virus reaches the surface MR. WEISS: All right. Let's go to the next 16 17 17 and how it interacts with the surface; correct? one. 18 18 That's correct, yes. (Exhibit No. 15, Jang Article marked for 19 19 identification) Q. And you have opinions regarding how long the 20 virus might stay infectious on the surface; is that 2.0 Q. Exhibit 15 is titled "Cluster of Coronavirus 21 21 correct? Disease Associated with Fitness Dance Classes, South 22 22 A. Yes, that's correct. Korea." And it looks like it was published in August of 23 23 Q. During the time that the virus remains 2020. Dr. Sauer-Budge, is this another article that was 24 24 infectious on the surface, do you have an opinion as to listed on your Appendix C?

Page 109 Page 110 1 A. Yes, that's correct. 1 to the airflow, but instead with regards to the, it says 2 2 Q. And, again, this was an article that you early in that sentence, "moist and warm atmosphere." So 3 located when you were looking for articles about fitness 3 with regards to those. 4 4 clubs? Q. Okay. And what -- what is your opinion with 5 A. That is correct. 5 respect to moist and warm atmosphere and how that impacts 6 Okay. On page 1919, in the bottom of the 6 the movement of the virus or the virus in general, if 7 7 first column, it says, "Characteristics that might have you --8 led to transmission from the instructors in Cheonan 8 MS. MANZO: Objection to the form. 9 9 A. Yeah, I don't have an opinion on how it include large class sizes, small spaces, and intensity of 10 impacts the movement of the virus. That's related to the the workouts. The moist warm atmosphere in a sports 10 11 air flow. But the -- so the data investigating the 11 facility coupled with turbulent airflow generated by 12 12 intense physical exercise can cause more dense different factors that inactivate SARS-CoV-2 in droplets, 13 transmission of isolated droplets." Do you see that? 13 partially in the air and -- since we're talking about 14 14 air, I'll talk about that as well as -- but on surfaces 15 Q. Okay. Is it your view that that's outside of 15 has to do with the rate of evaporation of those droplets 16 your expertise? 16 in the air. And the -- so the more humid the 17 A. With regard to the transmission of COVID, ves. 17 environment, that impacts the rate of evaporation; and 18 With regards to the -- what happens to the virus in the 18 the temperature also impacts the rate of evaporation. 19 19 air under different environmental conditions, then that Separately, the temperature has been studied 20 20 is part of my opinion. in -- particularly in laboratory environments as to the 21 21 impact of -- on the persistence of SARS-CoV-2. And in Q. Okay. And how -- what is your opinion with 22 22 respect to how turbulent airflow within a fitness club those studies, higher temperature is correlated with a 23 23 might affect how the virus is transmitted? more rapid inactivation of the virus. 2.4 A. So my opinion isn't necessarily with regards 24 Q. How is humidity correlated with inactivation Page 111 Page 112 1 of the virus? your search for information regarding fitness clubs? 2 2 A. So most of these studies are done on surfaces. And it -- at -- so it's not a linear relationship. It is 3 (Exhibit No. 17, Liu Article marked for identification) more of a U-shaped relationship. So in the middle zone 4 5 say 40 to 60 percent relative humidity, is where the 5 Q. Exhibit 17 is titled "Investigating SARS-CoV-2" highest rates of inactivation. So that inactivates Persistent Contamination in Different Indoor 7 faster. And then the more humid or the less humid Environments." It states that it was available online on outside of those result in slower rates. But that is if 8 July 28, 2021. Is this an article that's identified in 9 9 you keep all of the other factors constant. your Appendix C? 10 10 Q. Okay. And the other factors could include A. Yes. 11 temperature? 11 Q. Okay. Do you recall what your purpose was for 12 A. Correct. 12 listing this article in your Appendix C? 13 (Exhibit No. 16, Suhs Article marked for 13 A. Let me review the abstract briefly. 14 identification) 14 Yes. So I included this article because it 15 Q. Exhibit 16 looks like an article or a 15 investigates the persistence of SARS-CoV-2 in a number of 16 manuscript titled "COVID-19 Outbreak Associated with a 16 environments. Particularly, it looks at collection of 17 17 Fitness Center in Minnesota, September to November of samples that from, in this case, I believe it said a 18 2020." It looks like it's published in -- this says, at 18 department store that had been closed for unknown period 19 19 of time and looked for the presence of viral RNA and the the bottom, "The Author(s) 2021. Published by Oxford 20 University Press." Is this another article that's cited 2.0 presence of infectious virus. They tested for both. 21 21 in your Appendix C? Q. And did it also look at an apartment as well? 22 22 A. Yes, it is. The journal is the "Clinical A. Yes, that's correct. 23 23 Infectious Diseases." Q. All right. And when you -- when you use the term "persistence," what do you mean by that? 24 Q. And did you locate this in your -- as part of

	Page 117		Page 118
1	they are doing it with controls to try to rule out that	1	environmental surfaces." Do you see all that?
2	there was something in the sample that inhibited or	2	A. I do.
3	created a false positive. So, generally, when you're	3	Q. Okay. Does that does it look like they
4	saying when researchers say that no virus was no	4	then did some culturing on the samples that they got from
5	viable virus or no infectious virus was found, they mean	5	the from the food packages? Because they say that
6	that it there were no signs of infection of those	6	infectious SARS-CoV-2 can exist for at least 60 days.
7	cells in the laboratory.	7	A. I am not remembering.
8	Q. If you look at page 12 of this article which	8	Q. Because I didn't see that either.
9	is Exhibit 17.	9	A. I don't see it. I think that they are
10	A. Okay.	10	referring to another study.
11	Q. In the conclusion, it says, "SARS-CoV-2 RNA	11	On page 10, it says, "In low temperature
12	can be detected by RT-PCR 57 days after the last exposure		environments under minus 18 degrees C" are you with
13	in room-temperature environments, much longer than	13	me?
14	previous reports. Doorknobs and toilets, bathrooms, in	14	Q. Yeah.
15	paren, were important positions in COVID-19 control.	15	A. Okay.
16	Infectious SARS-CoV-2 can exist for at least 60 days on	16	"the infectious virus particle could
17	the surface of cold-chain food packages under minus 18	17	survive longer than an in-room temperature environments
18	degrees Celsius. High risk populations of	18	And then they reference various articles. So I think
19	cold-chain-related logistic operations such as porters	19	that they are referring to those.
20	require strict prevention and high-level personal	20	Q. Okay. And then when they say, "Cleaning with
21	protection. Even after disinfection, SARS-CoV-2 RNA ca		water and detergents is an effective way to eliminate the
22	still be partially detected in the environment. Cleaning	22	persistent existence of RNA fragments on environmental
23	with water and detergent is an effective way to eliminate	23	surfaces," I guess my question is why would you even car
24	the persistent existence of RNA fragments on	24	about RNA fragments on environmental surfaces enough

Page 130 Page 129 1 laboratory studies on those types of materials or 1 types of microbes all around us. And so, just generally 2 2 real-world studies that may be similar context. when I say "everywhere," I mean around in the 3 3 Q. If you go to page 164 of your deposition -- of environment. 4 your trial transcript testimony. So it should say page Q. In your average fitness club where people are 5 5 161 to 164 at the bottom. working out throughout the day and breathing heavily. 6 6 A. Okay. On page 164, you said? would you be surprised not to find viruses of some son 7 Q. Yeah. or another on surfaces within a gym at any given time' 8 8 Okay. A. Viruses in particular? Many -- many 9 9 And then on line -- beginning on line 18 and respiratory viruses, which I think is what you're 10 going to line 20, you say, "Viruses and biological 10 referring to when you're saying "breathing," those may 11 11 material are everywhere. It's coating all of the degrade fairly rapidly, and so we may not find infection 12 12 surfaces around us." Do you see that? virus. But I would be very surprised if we didn't find 13 A. I do. 13 some sort of genetic material from viruses. 14 Okay. And that's still your belief today; Q. 14 Q. Does the fact that you find genetic material 15 correct? 15 for viruses on a surface mean that at some point in time 16 A. Let me just -- it is my belief, but let me 16 those -- that viral material was infectious when it was 17 clarify what I meant by that. 17 on the surface? 18 I didn't mean that every single surface that 18 A. No, it doesn't mean that. 19 19 you touch will have a specific -- that you investigate Q. Why not? 20 20 A. Because just as a simple example -- there's will have a specific virus or a specific biological 21 complex reasons. Let's see. So to start with, when you material. But rather, as I was describing before, humans 21 22 are constantly emitting respiratory droplets or we're --22 breathe out, the respiratory droplets start to evaporate 23 we're shedding skin cells. We're -- when we touch 23 and rapidly inactivate many viruses. We already talked 24 things, we leave behind skin oils. There are different 24 about in this context. So by the time that it lands on Page 131 Page 132 1 the surface, it may not be infectious. it would have been reported in the scientific 2 Q. Would it have been infectious at some point 2 literature." between the time it was exhaled from the individual to 3 What were you intending to convey by that the time it hit the surface? 4 statement? 5 A. Also not necessarily. 5 MS. MANZO: Objection to form. 6 Q. Okay. Why not? A. So, in part, this was in response to a line of 7 A. Because not all of the genetic material from questioning that was focused on whether because viruse 8 the virus that is inside of your body or inside of your interacting with surfaces hadn't -- in a way that damage 9 mouth is associated with infectious virus. It can be the underlying surface hadn't been reported, does that 10 understood, at least in part, because your immune system 10 mean that it just hasn't been reported? So it was, in 11 is working against those viruses, and so they are working 11 part, in line with questions -- or to discuss and respond 12 to degrade those viruses. And so you'll have -- you will 12 to questions along those lines. 13 still have potentially viral RNA in a sample that -- or, 13 And what I was trying to convey is that it has 14 like, in your body that isn't associated with an 14 been understood for a long time how viruses interact with 15 15 infectious virus anymore. inanimate surfaces in terms of the general types of 16 Q. If you go to page 161 of your testimony. So 16 forces that are involved; and, also, that viruses are 17 17 that would be the -- I guess the top left block. understood, as part of the definition of a virus, that 18 18 they are not able to infect inanimate objects. They can A. Yes. 19 19 only infect host cells. And so the -- and then outside Q. At the -- beginning at line 28, you say, "So 20 if a new virus had the ability to somehow change the 20 of the host cell, they are inert in that they don't 21 21 underlying surface to eat into it or to dissolve it, that change the environment around them outside of a host 22 would be a new type of virus and perhaps not even a new 22 cell. 23 virus. It would be something that was brand new in 23 Q. Okay. And when you say "they don't change th biology that's unknown. Certainly, if this was the case environment around them," what do you mean by that? 24

	Page 133		Page 134
1	A. Well, so I gave some examples in here such as	1	submitted in the Santa Ynez case?
2	dissolving a surface or emitting different types of toxic	2	A. Yes.
3	gases or somehow burrowing into a surface would be some	3	Q. And is that one of the cases that you also
4	examples of things viruses don't do.	4	gave deposition testimony in?
5	Q. Okay.	5	A. Yes.
6	MS. MANZO: When we get to a good breaking	6	Q. Okay. I don't have any other questions about
7	point.	7	that one.
8	MR. WEISS: We can take a break now. That's	8	So part of your opinions in this case involve
9	fine.	9	your view that viruses like SARS-CoV-2 adhere to
10	THE VIDEOGRAPHER: We are going off the recor	d 10	surfaces; correct?
11	at 1:59 p.m.	11	A. By "adhere," you mean if you mean they

And if a force acts upon it, it's reversible, and you can take them apart. So just like I took my two fingers apart here. Q. Okay. And with regard to the SARS-CoV-2 virus, you do agree that there is at least some period of
3 4 5 6 7 8	absorption, with a b, where it the the object that we're talking about sinks into or goes into the material. Q. Okay. Does the process of adsorption, with a d, involve a level of the substance, you know, sticking to the surface at all, or is there any aspect of that in the concept of adsorption?	3 4 5 6 7 8	interactions which are a combination of attractive and repulsive forces. And if a force acts upon it, it's reversible, and you can take them apart. So just like I took my two fingers apart here. Q. Okay. And with regard to the SARS-CoV-2 virus, you do agree that there is at least some period of time where the SARS-CoV-2 virus can be infectious and be
3 4 5 6 7 8 9	absorption, with a b, where it the the object that we're talking about sinks into or goes into the material. Q. Okay. Does the process of adsorption, with a d, involve a level of the substance, you know, sticking to the surface at all, or is there any aspect of that in the concept of adsorption? A. So "sticking" is is not a scientific term.	3 4 5 6 7 8	interactions which are a combination of attractive and repulsive forces. And if a force acts upon it, it's reversible, and you can take them apart. So just like I took my two fingers apart here. Q. Okay. And with regard to the SARS-CoV-2 virus, you do agree that there is at least some period of time where the SARS-CoV-2 virus can be infectious and lon a surface; correct?
3 4 5 6 7 8 9	absorption, with a b, where it the the object that we're talking about sinks into or goes into the material. Q. Okay. Does the process of adsorption, with a d, involve a level of the substance, you know, sticking to the surface at all, or is there any aspect of that in the concept of adsorption? A. So "sticking" is is not a scientific term. The the way that it involves I'm trying to answer	3 4 5 6 7 8 9	interactions which are a combination of attractive and repulsive forces. And if a force acts upon it, it's reversible, and you can take them apart. So just like I took my two fingers apart here. Q. Okay. And with regard to the SARS-CoV-2 virus, you do agree that there is at least some period of time where the SARS-CoV-2 virus can be infectious and lo on a surface; correct? A. So whether the virus is infectious on the
3 4 5 6 7 8 9 10	absorption, with a b, where it the the object that we're talking about sinks into or goes into the material. Q. Okay. Does the process of adsorption, with a d, involve a level of the substance, you know, sticking to the surface at all, or is there any aspect of that in the concept of adsorption? A. So "sticking" is is not a scientific term. The the way that it involves I'm trying to answer your question.	3 4 5 6 7 8 9 10	interactions which are a combination of attractive and repulsive forces. And if a force acts upon it, it's reversible, and you can take them apart. So just like I took my two fingers apart here. Q. Okay. And with regard to the SARS-CoV-2 virus, you do agree that there is at least some period of time where the SARS-CoV-2 virus can be infectious and on a surface; correct? A. So whether the virus is infectious on the surface is a function of the environment that it's in.
3 4 5 6 7 8 9 10 11	absorption, with a b, where it the the object that we're talking about sinks into or goes into the material. Q. Okay. Does the process of adsorption, with a d, involve a level of the substance, you know, sticking to the surface at all, or is there any aspect of that in the concept of adsorption? A. So "sticking" is is not a scientific term. The the way that it involves I'm trying to answer your question. Q. Yeah, let me ask it differently.	3 4 5 6 7 8 9 10 11	interactions which are a combination of attractive and repulsive forces. And if a force acts upon it, it's reversible, and you can take them apart. So just like I took my two fingers apart here. Q. Okay. And with regard to the SARS-CoV-2 virus, you do agree that there is at least some period of time where the SARS-CoV-2 virus can be infectious and to on a surface; correct? A. So whether the virus is infectious on the surface is a function of the environment that it's in. It is possible that it can be.
3 4 5 6 7 8 9 10 11 12 13	absorption, with a b, where it the the object that we're talking about sinks into or goes into the material. Q. Okay. Does the process of adsorption, with a d, involve a level of the substance, you know, sticking to the surface at all, or is there any aspect of that in the concept of adsorption? A. So "sticking" is is not a scientific term. The the way that it involves I'm trying to answer your question. Q. Yeah, let me ask it differently. When a virus or other biologic material lands	3 4 5 6 7 8 9 10 11 12	interactions which are a combination of attractive and repulsive forces. And if a force acts upon it, it's reversible, and you can take them apart. So just like I took my two fingers apart here. Q. Okay. And with regard to the SARS-CoV-2 virus, you do agree that there is at least some period of time where the SARS-CoV-2 virus can be infectious and to on a surface; correct? A. So whether the virus is infectious on the surface is a function of the environment that it's in. It is possible that it can be. Q. Okay. And do you agree that the primary way
3 4 5 6 7 8 9 10 11 12 13 14	absorption, with a b, where it the the object that we're talking about sinks into or goes into the material. Q. Okay. Does the process of adsorption, with a d, involve a level of the substance, you know, sticking to the surface at all, or is there any aspect of that in the concept of adsorption? A. So "sticking" is is not a scientific term. The the way that it involves I'm trying to answer your question. Q. Yeah, let me ask it differently. When a virus or other biologic material lands on a surface, is there some process by which it is able	3 4 5 6 7 8 9 10 11 12 13 14	interactions which are a combination of attractive and repulsive forces. And if a force acts upon it, it's reversible, and you can take them apart. So just like I took my two fingers apart here. Q. Okay. And with regard to the SARS-CoV-2 virus, you do agree that there is at least some period of time where the SARS-CoV-2 virus can be infectious and lo on a surface; correct? A. So whether the virus is infectious on the surface is a function of the environment that it's in. It is possible that it can be. Q. Okay. And do you agree that the primary way by which SARS-CoV-2 virus reaches a surface is through
3 4 5 6 7 8 9 10 11 12 13 14	absorption, with a b, where it the the object that we're talking about sinks into or goes into the material. Q. Okay. Does the process of adsorption, with a d, involve a level of the substance, you know, sticking to the surface at all, or is there any aspect of that in the concept of adsorption? A. So "sticking" is is not a scientific term. The the way that it involves I'm trying to answer your question. Q. Yeah, let me ask it differently. When a virus or other biologic material lands on a surface, is there some process by which it is able to stay on the surface and not just, you know, fall off	3 4 5 6 7 8 9 10 11 12 13 14 15	interactions which are a combination of attractive and repulsive forces. And if a force acts upon it, it's reversible, and you can take them apart. So just like I took my two fingers apart here. Q. Okay. And with regard to the SARS-CoV-2 virus, you do agree that there is at least some period of time where the SARS-CoV-2 virus can be infectious and be on a surface; correct? A. So whether the virus is infectious on the surface is a function of the environment that it's in. It is possible that it can be. Q. Okay. And do you agree that the primary way by which SARS-CoV-2 virus reaches a surface is through the air?
3 4 5 6 7 8 9 10 11 12 13 14 15 16	absorption, with a b, where it the the object that we're talking about sinks into or goes into the material. Q. Okay. Does the process of adsorption, with a d, involve a level of the substance, you know, sticking to the surface at all, or is there any aspect of that in the concept of adsorption? A. So "sticking" is is not a scientific term. The the way that it involves I'm trying to answer your question. Q. Yeah, let me ask it differently. When a virus or other biologic material lands on a surface, is there some process by which it is able to stay on the surface and not just, you know, fall off the surface?	3 4 5 6 7 8 9 10 11 12 13 14 15 16	interactions which are a combination of attractive and repulsive forces. And if a force acts upon it, it's reversible, and you can take them apart. So just like I took my two fingers apart here. Q. Okay. And with regard to the SARS-CoV-2 virus, you do agree that there is at least some period of time where the SARS-CoV-2 virus can be infectious and to on a surface; correct? A. So whether the virus is infectious on the surface is a function of the environment that it's in. It is possible that it can be. Q. Okay. And do you agree that the primary way by which SARS-CoV-2 virus reaches a surface is through the air? MS. MANZO: Objection to form.
3 4 5 6 7 8 9 10 11 12 13 14 15 16 17	absorption, with a b, where it the the object that we're talking about sinks into or goes into the material. Q. Okay. Does the process of adsorption, with a d, involve a level of the substance, you know, sticking to the surface at all, or is there any aspect of that in the concept of adsorption? A. So "sticking" is is not a scientific term. The the way that it involves I'm trying to answer your question. Q. Yeah, let me ask it differently. When a virus or other biologic material lands on a surface, is there some process by which it is able to stay on the surface and not just, you know, fall off the surface? A. Yes.	3 4 5 6 7 8 9 10 11 12 13 14 15 16 17	interactions which are a combination of attractive and repulsive forces. And if a force acts upon it, it's reversible, and you can take them apart. So just like I took my two fingers apart here. Q. Okay. And with regard to the SARS-CoV-2 virus, you do agree that there is at least some period of time where the SARS-CoV-2 virus can be infectious and be on a surface; correct? A. So whether the virus is infectious on the surface is a function of the environment that it's in. It is possible that it can be. Q. Okay. And do you agree that the primary way by which SARS-CoV-2 virus reaches a surface is through the air? MS. MANZO: Objection to form. A. The way you phrase this is a little bit hard, but if you mean the primary way is through respiratory
3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18	absorption, with a b, where it the the object that we're talking about sinks into or goes into the material. Q. Okay. Does the process of adsorption, with a d, involve a level of the substance, you know, sticking to the surface at all, or is there any aspect of that in the concept of adsorption? A. So "sticking" is is not a scientific term. The the way that it involves I'm trying to answer your question. Q. Yeah, let me ask it differently. When a virus or other biologic material lands on a surface, is there some process by which it is able to stay on the surface and not just, you know, fall off the surface? A. Yes. Q. Okay.	3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18	interactions which are a combination of attractive and repulsive forces. And if a force acts upon it, it's reversible, and you can take them apart. So just like I took my two fingers apart here. Q. Okay. And with regard to the SARS-CoV-2 virus, you do agree that there is at least some period of time where the SARS-CoV-2 virus can be infectious and be on a surface; correct? A. So whether the virus is infectious on the surface is a function of the environment that it's in. It is possible that it can be. Q. Okay. And do you agree that the primary way by which SARS-CoV-2 virus reaches a surface is through the air? MS. MANZO: Objection to form. A. The way you phrase this is a little bit hard, but if you mean the primary way is through respiratory
3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18	absorption, with a b, where it the the object that we're talking about sinks into or goes into the material. Q. Okay. Does the process of adsorption, with a d, involve a level of the substance, you know, sticking to the surface at all, or is there any aspect of that in the concept of adsorption? A. So "sticking" is is not a scientific term. The the way that it involves I'm trying to answer your question. Q. Yeah, let me ask it differently. When a virus or other biologic material lands on a surface, is there some process by which it is able to stay on the surface and not just, you know, fall off the surface? A. Yes. Q. Okay. A. So when materials interact and, in this	3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20	interactions which are a combination of attractive and repulsive forces. And if a force acts upon it, it's reversible, and you can take them apart. So just like I took my two fingers apart here. Q. Okay. And with regard to the SARS-CoV-2 virus, you do agree that there is at least some period of time where the SARS-CoV-2 virus can be infectious and to on a surface; correct? A. So whether the virus is infectious on the surface is a function of the environment that it's in. It is possible that it can be. Q. Okay. And do you agree that the primary way by which SARS-CoV-2 virus reaches a surface is through the air? MS. MANZO: Objection to form. A. The way you phrase this is a little bit hard, but if you mean the primary way is through respiratory droplets emitted by a person sick with COVID-19, and the
3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20	absorption, with a b, where it the the object that we're talking about sinks into or goes into the material. Q. Okay. Does the process of adsorption, with a d, involve a level of the substance, you know, sticking to the surface at all, or is there any aspect of that in the concept of adsorption? A. So "sticking" is is not a scientific term. The the way that it involves I'm trying to answer your question. Q. Yeah, let me ask it differently. When a virus or other biologic material lands on a surface, is there some process by which it is able to stay on the surface and not just, you know, fall off the surface? A. Yes. Q. Okay. A. So when materials interact and, in this case, we're talking about a biological material,	3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20	interactions which are a combination of attractive and repulsive forces. And if a force acts upon it, it's reversible, and you can take them apart. So just like I took my two fingers apart here. Q. Okay. And with regard to the SARS-CoV-2 virus, you do agree that there is at least some period of time where the SARS-CoV-2 virus can be infectious and to on a surface; correct? A. So whether the virus is infectious on the surface is a function of the environment that it's in. It is possible that it can be. Q. Okay. And do you agree that the primary way by which SARS-CoV-2 virus reaches a surface is through the air? MS. MANZO: Objection to form. A. The way you phrase this is a little bit hard, but if you mean the primary way is through respiratory droplets emitted by a person sick with COVID-19, and the those, at some point, coming in contact with surfaces,
3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21	absorption, with a b, where it the the object that we're talking about sinks into or goes into the material. Q. Okay. Does the process of adsorption, with a d, involve a level of the substance, you know, sticking to the surface at all, or is there any aspect of that in the concept of adsorption? A. So "sticking" is is not a scientific term. The the way that it involves I'm trying to answer your question. Q. Yeah, let me ask it differently. When a virus or other biologic material lands on a surface, is there some process by which it is able to stay on the surface and not just, you know, fall off the surface? A. Yes. Q. Okay. A. So when materials interact and, in this case, we're talking about a biological material, SARS-CoV-2 with an inanimate surface, when they	3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 - 21 22	interactions which are a combination of attractive and repulsive forces. And if a force acts upon it, it's reversible, and you can take them apart. So just like I took my two fingers apart here. Q. Okay. And with regard to the SARS-CoV-2 virus, you do agree that there is at least some period of time where the SARS-CoV-2 virus can be infectious and be on a surface; correct? A. So whether the virus is infectious on the surface is a function of the environment that it's in. It is possible that it can be. Q. Okay. And do you agree that the primary way by which SARS-CoV-2 virus reaches a surface is through the air? MS. MANZO: Objection to form. A. The way you phrase this is a little bit hard, but if you mean the primary way is through respiratory droplets emitted by a person sick with COVID-19, and the those, at some point, coming in contact with surfaces, that's that's the primary way. I agree with that.

Page 138 Page 137 1 A. Yes, they have to be in -- well, I suppose 1 well, let me ask this. Are you aware of any studies that 2 2 unless they're really close to the surface and licking it have been done in a real-life operating business where 3 or something. I could think of options where that's not 3 people are coming in and out on a daily basis to test 4 4 the case. whether live virus is present as the business is 5 Q. Okay. 5 operating on a daily basis as opposed to just looking at 6 But, generally, yes, those respiratory 6 virus on the surface and looking at it again a number of 7 droplets need to travel at least some distance through 7 days later to see if it's still live but without this 8 8 ongoing daily interaction of people coming in and out? 9 Q. And do you agree that even if you're able to 9 If you get -- if you understand what I'm saying. 10 clean a virus like SARS-CoV-2 from a surface, as hosts 10 A. I'm not fully sure, but let me try. 11 come in and out of a location, the virus might be 11 Q. Uh-huh. 12 12 reintroduced onto surfaces; correct? A. The -- I think you're asking about frequency 13 MS. MANZO: Objection to form. 13 of sampling? Is that correct? 14 A. So I think you're asking if one person comes 14 Q. Right. So let's take a fitness club like 24 15 in, is sick with COVID, emits virus, and the conditions 15 Hour Fitness. 16 are -- allow that virus to be infectious on the surface, 16 A. Yes. 17 then somebody comes by and disinfects the surface -- the 17 Q. And it's operating -- it might be operating 24 18 virus may have already degraded on its own, but somebody 18 hours a day, seven days a week with people coming in and 19 19 out. Are you aware of any tests that attempted to comes by, disinfects the surface, then somebody else 20 comes in to the exact same spot who is sick with COVID 20 identify on a -- like, a daily basis the level of virus 21 and, again, breathes onto the surface, there is a 21 that might be present in an operating facility like that 22 22 possibility that infectious virus from that second person where people are coming in and out all the time? 23 23 can be introduced to that same surface. A. Let's see. To be -- there are some studies 2.4 Q. The studies that have been done of how long -which measure or sample from the same general location Page 139 Page 140 in subsequent periods of time. I'm not aware of any that 1 So as we already discussed, I believe, a 2 do it on -- at a high frequency such as daily or minute variety of factors can change those times. And so if you 3 3 want to look at persistence time, you need to control 4 Q. Okay. So a study that would, you know, 4 these other factors. And that can primarily be and 5 evaluate how long SARS-CoV-2 might persist on a piece of 5 possibly only be done in a laboratory. 6 metal over, you know, some period of time, let's say 20 Laboratory studies have limitations into --7 7 days, is not really that useful to a business like a gym with regards to how -- how much you can take that data 8 where people are coming in and out every hour or half an and interpret that data and then infer information about 9 hour and some -- and some may be sick and some may have 9 what happens in the real world. 10 So on the other side, you have real-world viruses, and, you know, it might -- how -- you know, for 10 11 an operating business, how useful do you think a study is 11 studies where you may have people who are sick with 12 of the persistence of a virus on a given piece of 12 COVID-19 emitting potentially infectious virus. In thos 13 13 cases, you cannot control when it's emitted, how much material over a period of time? 14 MS. MANZO: Objection to form. 14 is emitted, whether it's actually infectious by the time 15 15 A. So, in general, there are two types of studies it gets to a surface. So you can't control those things. 16 which can provide some information that I think has 16 But on the other hand, you can understand if I take 17 17 utility to businesses who are considering operational measurements at different places or at a certain time 18 18 when a person who is sick in -- in the room is present, choices. The ones where we can measure the persistence 19 time of a virus, SARS-CoV-2, in -- over time and measure 19 then you can take that information, but you have to 20 at -- at, you know, different frequencies -- it could be 20 really understand the limitations and the strengths of 21 21 hours. It could be minutes. It could be days. Those both types of studies. I think both have utility in

understanding what happens, but they are different sorts

Part of the reason why you can't do a -- the

of experiment s.

22

23

24

22

23

24

are primarily conducted in a laboratory environment

impact the persistence time.

because you can control the various factors that would

2

Page 141

- 1 type of study that you're asking about is because the --
- 2 you cannot control the amount of virus that is
- 3 introduced. So it would be -- clearly, it would be
- 4 unethical to take infectious SARS-CoV-2 and spray it in
- 5 an operating business. So we can't do that.
 - Q. Or bring people that you know are infected into the business?
 - A. For the same reason. It would be unethical to carry out a -- some sort of study like that.
- 10 So the one that we looked at earlier where --11 in the department store where they knew that the
- 12 department store was closed for 57 days, and they went in
- 13 and they found at least viral RNA in -- does that type of
- 14 study have -- in your opinion, have any utility for a
- 15 business like a 24 Hour Fitness who's trying to figure
- 16 out how to operate every day? Because, presumably, they 17 would actually be open and operating during those 57 days
- 18 with people coming in and out all the time.
- 19 MS. MANZO: Objection to form.
- 20 A. So I think any utility is -- I think there's
- 21 some utility. I don't know that it provides a
- 22 significant amount of information to inform
- 23 operational -- daily operational choices, that particular
- 24 study.

1

6

7

8

9

Page 142

- 1 Q. Are you aware of any studies regarding the persistence of COVID-19 or the SARS-CoV-2 virus on 2 3 surfaces that would be -- that would provide a 4 significant amount of information to inform operational
- 5 or daily operational choices, as you said? 6 A. So I think this -- the sum of the laboratory
- 7 data and the real-world studies do provide potentially 8 actionable information.
 - Q. Okay. And, in your opinion, what actual information do they provide?
 - A. So I believe that they provide information as to the general conditions under which SARS-CoV-2 is mo likely to remain infectious in an environment; particular information about the effectiveness of different disinfection chemistries; the -- and then some information with regards to distance that you may find -you may be able to collect infectious virus or detect infectious virus away from somebody who is sick. So those, to me, would provide information that would be useful. I'm not involved in developing mitigation protocols, but I think that that information is useful.
 - Q. Okay. Let's go back to Exhibit 8 which is your report. Let's see. If you go to page 2, the qualifications section.

Page 143

- A. Okay. I'm there.
- 2 Q. In paragraph -- in paragraph 2.2, you say,
- 3 "Broadly speaking, my expertise is at the interface of
 - biology and materials." Can you explain what you mean by
- 5
- 6 A. Yes. So, generally, I describe it as the
 - interface between biology and materials because I'm
- thinking biology, or what I'm trying to explain by
- 9 biology, means living or organic material and how those
- 10 interact with inanimate materials. So that's the
- 11 materials aspect. So the organic or biological materials
- 12 and how those interact with inanimate materials.
- 13 Q. And then if you go to page 4 of your report,
- 14 paragraph 3.2, we're now on the executive summary.
- 15 A. Yes.
- 16 Q. You say, "For reasons explained further below,
- 17 it is my opinion that there is no scientific basis for
- 18 the assertion that SARS-CoV-2 adversely affects the
- 19 surfaces or surrounding air it contacts or that this
- 20 coronavirus remains infections" -- "infectious after
- 21 either general degradation or disinfection by one of a
- 22 wide range of effective means." Do you see that?
- 23 A. I do.
- 24 Okay. And how do you define what it means for

Page 144

- something to "adversely affect" a surface?
- A. So there are a number of different mechanisms
- 3 that potentially could fall under that description. One
- of them would be if there was some sort of chemical
- 5
- reaction that changed the underlying material. One could be more of a physical mechanism such as creating holes
- 7 the material that would damage its mechanical stability.
- There could be a material that interacts with it such
- 9 that -- not -- not necessarily that there's a chemical
- 10 reaction, but such that the material is changed in a way
- 11 that -- that makes it no longer useful for the particular
- 12 context, I guess. So I'm thinking of, for example,
- 13 staining. If a dye were -- or bleach were put on a
- 14 material, then there could be a significant stain. And
- 15 if that material was used, I don't know, as clothing, for
- 16 example, you probably wouldn't want to use it anymore.
- 17
- Q. Okay. And then when you talk about adversely 18 affecting surrounding air, can you explain what you mean
- 19 by that?
- 20 A. Yes. So the -- so air is -- when I refer to
- 21 air, I'm referring to the gaseous material which is
- 22 primarily nitrogen with -- well, 78 percent nitrogen, 21
- 23 percent oxygen, and then 1 percent of everything else.
 - That "everything else" includes other gases but also
